

Airbnb EDA

Influencing Customer Ratings and Demand

Jonathan Ho, Sarah Ki, Victor Ndayambaje and Ravi Siddappa

Executive Summary

- This presentation covers the insights drawn from data set to help Airbnb expand its presence and grow profitably
- Key findings are discussed with focus on finding key listing features, which separate general properties from stellar properties
- Though data set presented challenges and prevented from drawing direct insights, team was able to highlight key features the company need to focus on to increase the likelihood of turning any property to stellar properties
- This presentation concludes with specific recommendations and next steps for Airbnb executives

Improving Airbnb from Today

1.5+ Billion

Key Questions

1. What are the top 10 countries with the highest number of listings?
2. Are there any correlations between the listings' features and rating?
3. How do popular and highly rated listings compare with less popular and more lowly rated listings in their features?
4. Which are the countries with both a high number of popular and highly rated listings, and high percentage of such listings?
5. Which locations in these countries in question four should Airbnb put more resources in?

Data Processing

*NOTE: Converted price from local to USD, but not all matched airbnb pricing. Dropped

What are the top 10 countries with the highest number of listings?

India has the most number of listings due to its rapidly growing middle class and increasing domestic travel

airbnb

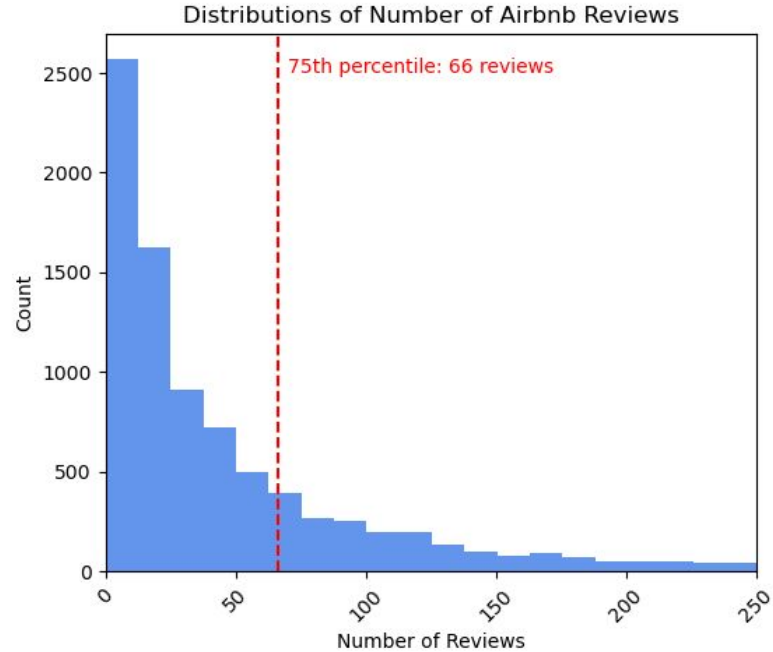

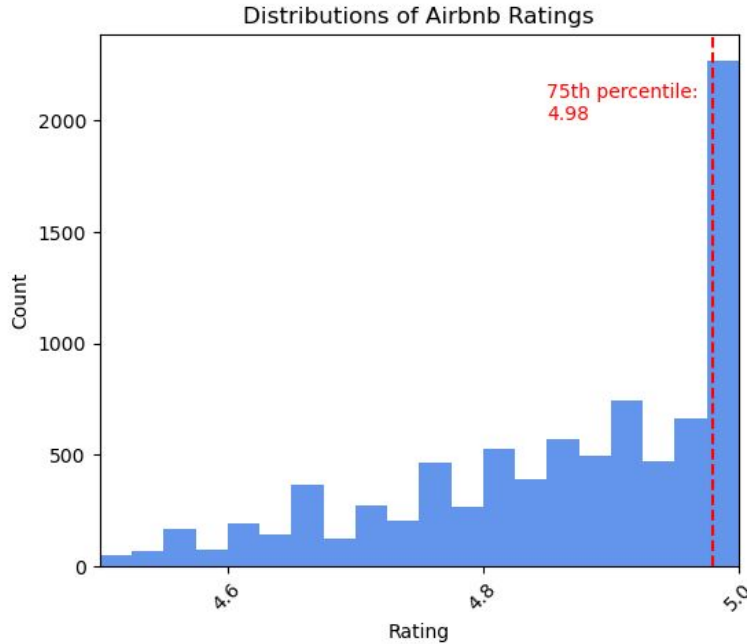

Are there any correlations between the listings' features and rating?

Unable to determine which listing features are most strongly correlated with higher ratings

What is a stellar listing?

- Stellar listing
 - Listings with the most count of 4.98 ratings or higher
 - Listings with the most count of at least 66 reviews or more

airbnb

How do stellar and non-stellar listings compare in the number of house rules?

Distribution of Number of House Rules, Normalized to Respective Populations

Box Plot of Number of House Rules

- Stellar listings with more house rules -> higher ratings
- Clear expectations and maintained quality -> higher guest satisfaction.

airbnb

How do stellar and non-stellar listings compare in number of image links and number of amenities?

Distribution of Number of Image Links, Normalized to Respective Populations

Distribution of Amenities Number, Normalized to Respective Populations

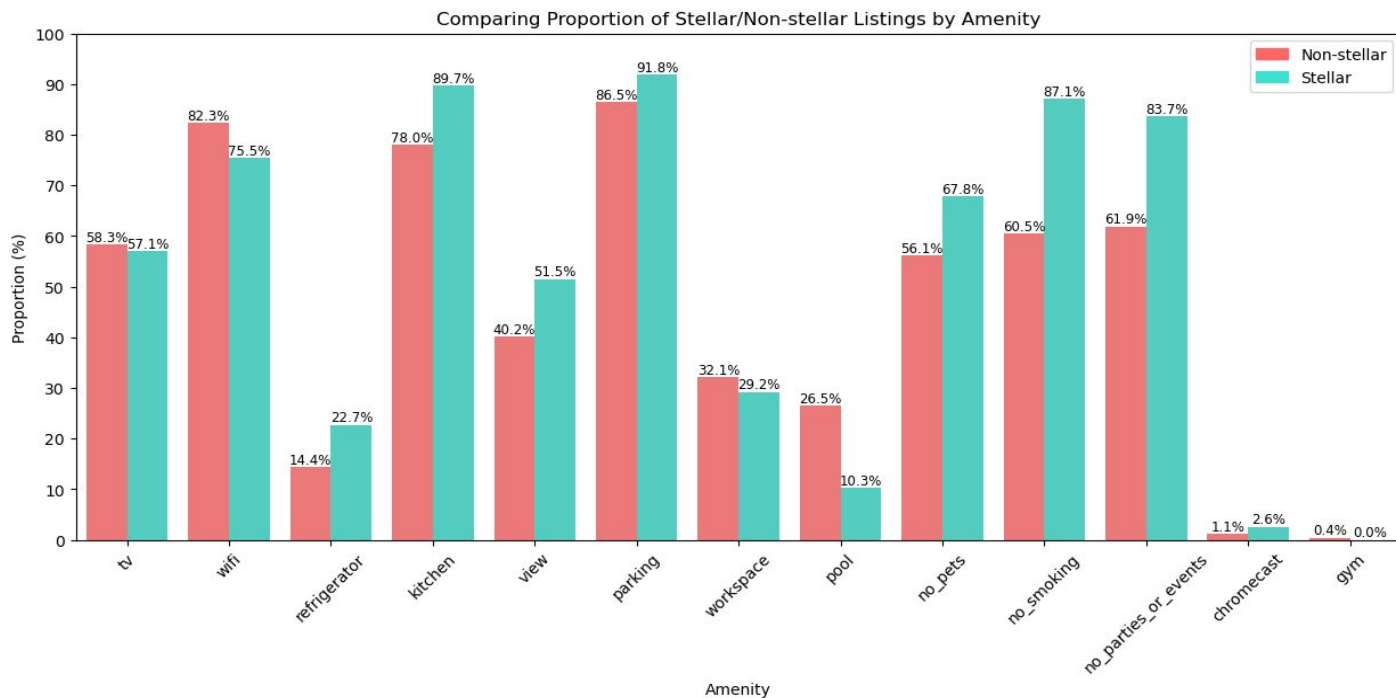

- Stellar and non-stellar listings have no difference in numbers of images and amenities
- Number of features and images are not key differentiators for stellar status.

airbnb

How do stellar and non-stellar listings compare in type of amenity?

Stellar listings often feature amenities like views, parking, a kitchen, a refrigerator, and specific house rules

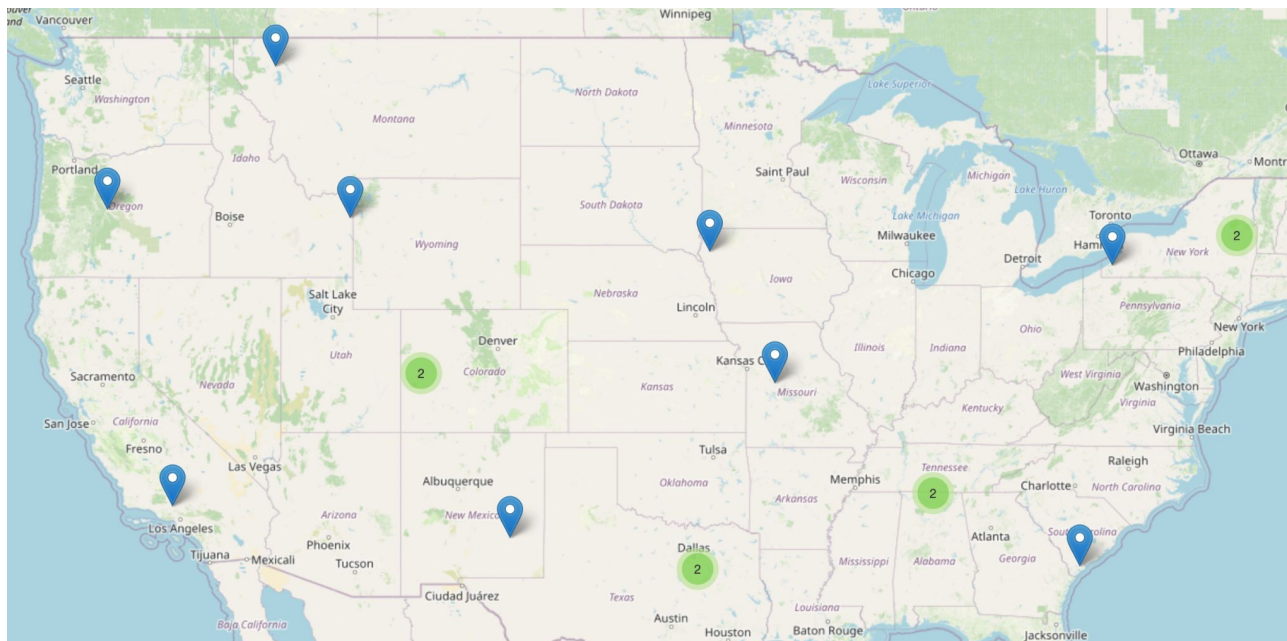

Which are the countries with both a relatively high number of stellar listings, and high percentage of stellar listings?

Country	Number of Stellar Listings (Percentage Stellar Listings)	Number of Non-stellar Listings
United Kingdom	60 (20%)	236
Greece	18 (2%)	730
United States	18 (10%)	158
France	16 (4%)	397
Italy	15 (2%)	713
Poland	8 (8%)	90
Norway	8 (4%)	176
Romania	7 (9%)	70
Iceland	7 (23%)	23
Japan	7 (2%)	302

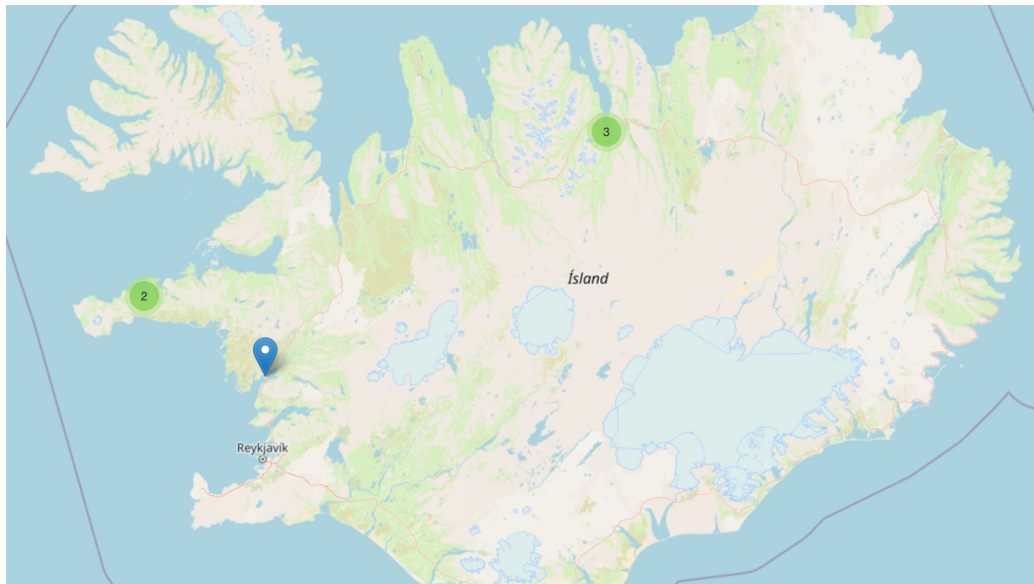

Which locations in the United States should Airbnb put more resources in?

No clustering in major cities; stellar listings in the U.S. prioritize serenity and views over convenience

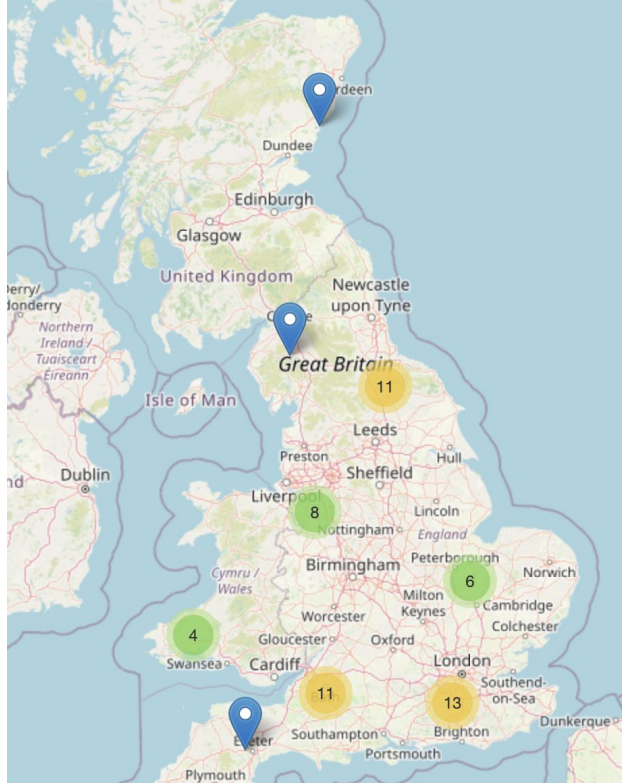

Which locations in Iceland should Airbnb put more resources in?

Stellar listings are clustered around tourist spots

Which locations in the United Kingdom should Airbnb put more resources in?

Many stellar listings are located in scenic rural areas; an escape from city life.

Conclusion

- Stellar listings, identified by high ratings and numerous reviews, often have clear and detailed house rules that enhance guest satisfaction; Airbnb can encourage hosts to adopt such rules.
- The UK, US, and Iceland have a high concentration of stellar listings, suggesting that investing in these regions by enhancing listing quality and offerings could yield substantial benefits. Notably, many such listings were escapes from the cities.
- High-growth markets like India and Italy, with many listings but fewer stellar ones, can improve by adopting strategies from the UK, US, and Iceland, such as clear house rules and a focus on escapes from large cities.
- Findings and recommendations are for Airbnb's leadership's consideration.
